

WORLD LEADER IN RESTAURANT MOTION

# Revolving Restaurants

**MACTON**

The Macton Corporation

# Macton Revolving Restaurants can enhance your business by over 50%.

*With more than 50 years of experience, Macton is the world leader in restaurant turntable engineering and construction. Macton can produce restaurant turntables of virtually any size, to meet any design parameters.*

**F**rom New York to San Francisco; from Jakarta to Reykjavik; in almost any country in the world you will find a Macton Revolving Restaurant installation. In fact, with over 100 installations in the U.S. and around the globe, Macton has earned the reputation of engineering and building the very finest large-scale turntables in the world. That's why we have captured the revolving restaurant market. It's not surprising when you consider the many advantages of Macton turntables...

**Attract 50% more business** — Executives of some of the largest hotel chains have found that the unique nature of a revolving restaurant attracts 50% more business than a comparable stationary restaurant with the equivalent menu, prices and service\*. No wonder, then, that Holiday Inns, Hyatt and Hilton hotels and five star hotels around the world feature many Macton revolving restaurants, and continue to plan more.

**Imperceptible Motion** — A revolving restaurant is an incredible engineering achievement. Think about it! The turntable must support the weight of a large room, including furniture and people. It is called upon to function flawlessly for many years with minimum routine maintenance. And it must rotate so smoothly, so quietly and so imperceptibly that the patrons are virtually unaware of the motion, except, of course, for the slowly changing scene. That's where Macton engineering comes to the fore.

**Absolute Reliability** — The heart of the Macton restaurant turntable is a patented, self-compensating, vibration dampening, friction

wheel drive system. For the ultimate in smooth, reliable operation, Macton uses a dual-drive system. The extreme simplicity of the Macton turntable mechanism makes it totally reliable and almost totally maintenance-free. Most of our restaurant turntables consist of a doughnut-shaped ring which revolves around a stationary service core. They're simply superior.

*FAR LEFT: Revolving restaurants can tower above the city-scape, becoming focal points for tourists.*

*LEFT ABOVE: Dining in a revolving restaurant such as the CN Tower in Canada, can be one of life's great moments.*

*ABOVE: The revolving restaurant can become the life of any party.*

*ABOVE RIGHT: Revolving restaurants all over the world enhance the dining experience with ever-changing panoramic views.*

*LEFT: Every great view in every great city deserves a great revolving restaurant where every patron gets the best view in the house.*

**Macton Works with Architects** — To ensure a successful project, Macton engineers will work closely with the architect throughout the project. We provide both architects and builders with in-depth technical information, including foundation, electrical and control requirements, trim details, structural analysis data and whatever else is needed from concept through completion. We provide complete budgeting data for project planning.

**Great Design Flexibility** — Macton has built restaurant turntables measuring from 26 feet to more than 140 feet in outside diameter. We have also fabricated solid platform and multi-level turntables. A variable speed drive is standard, and turning speeds generally range from three to five feet per minute at the periphery. The ability to vary speeds can be a valuable feature for restaurateurs who wish to encourage turnover during peak meal hours. It has been shown that slightly faster rotation tends to shorten a patron's stay.

**Unique Quality** — A major reason for the unmatched reliability of Macton turntables is our practice of fully assembling and testing every turntable at our facility prior to shipment. The turntables are then match-marked prior to disassembly to ensure ease of reassembly and installation at the job site. A specially trained Macton factory representative is provided to supervise on-site installation and ensure adherence to Macton's stringent requirements. The bottom line is that no company can compete with Macton when it comes to experience and product reliability in restaurant turntables.
